The invention relates to primate and rodent DNAX cytokine receptor subbunit (DCRS) polypeptides and the polyunclectides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents the human DCRSB polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ASRNSGLYNITFKYDNCTTYLNPVGKHVIADAQNITISQYACHDQVAVTILWSPGALGIE 120

or its partial peptide, an antibody binding to the polypeptide or cof the polymuclectide, immunologically assaying the polypeptide or peptide of peptide of the polymuclectide by contexting the polypeptide or peptide of with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polymuclectide in an expressible manner and an antisense polymuclectide. The oligonuclectide of su suseful as a primer for synthesising the polymuclectide, or as a probe for detecting the polymuclactide. The polymuclectide, or as a probe of proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and activity, or as targets of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or call regeneration. Membrane proteins, signal transduction-related proteins, cranscription-related proteins, disease-related proteins and genes encoding them can be used as indicators for diseases (e.g. osteoporosis, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KVVPFPSIKNESNYHPFFFRTRACDLLLQPDNLACKPFWKPRNLNISQHGSDMQVSFDHA 210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     415
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     715

The sequence is PRO20026 which is the human Interleukin 17 receptor, IL-
17RH4, encoded by DNA 154095-2998. A composition containing ant/agonists
to the PRO polypeptides or individual components are useful for treating
a mammal with an immune related disease, e.g. systemic lupus
erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic
arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic
inflammatory myopathy, Sjogren's syndrome, systemic vasculitis,
sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia,
thyroiditis, diabetes mellitus, immune-mediated renal disease, a
demyelinating disease, an autoimmune or immune-mediated skin disease,
contact dermatitis, an allergic disease, e.g. food hypersensitivity,
asthma, a transplantation associated disease, or a chronic inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          demyelinating polyneuropathy. Treating a degenerative cartilaginous disorder comprises administering a PRO1031 or PRO1122 polypeptide agonist, or antagonist to the mammal. Numerous examples of the diseases and disorders are given in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Grimaldi CJ;

WPI; 2003-428843/40. N-PSDB; ACA89858 New PRO polypeptides and polynucleotides homologous to interleukin-17, useful for treating e.g. systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, or systemic sclerosis

Claim 10; Fig 18; 129pp; English.

The invention relates to a nucleic acid having similarity to interleukin
(C 17 (IL-17) or IL-17 receptor comprises at least 80% nucleic acid sequence
clantity to a nuclectide sequence which: (a) encodes a polypeptide having
a sequence of appearing as ABUB969708 and ABUB9708-ABUB9701
(C 18), lacking or having its associated signal peptide; (b) encodes an

(C 2), lacking or having its associated signal peptide; (c)

(C 2) consists of a sequence of appearing as ACAB9850-ACAB9855
(C 2) consists of a sequence of appearing as ACAB9850-ACAB9855
(C 3) consists of the full-length coding sequence of

(C 3) consists of the cDNA deposited under ATCC accession

(C 3) consists of the cDNA deposited under ATCC accession

(C 4) consists of the cDNA deposited under ATCC accession

(C 5) consists of the cDNA deposited under ATCC accession

(C 5) consists of the cDNA deposited under ATCC accession

(C 6) consists of the cDNA deposited under ATCC accession

(C 6) consists of an activity (or mimicking the polypeptides or ant/Agonists, enhancing the infiltration of for inflammatory cells into a tissue of a mammal by administering a PRO1031 polypeptide, its ant/Agonist or an anti-PRO1031

(C 6) consistering a PRO1031 polypeptide, its ant/Agonist or an anti-PRO1031

(C 6) consistering a PRO1031 polypeptide, its ant/Agonist or an anti-PRO1031

(C 6) construction of an activity (or acti chronic inflammatory demyelinating polyneuropathy, a hepatobiliary chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary billary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Mhipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, urticaria, an immunologic disease of the lung,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 10,

Sequence 1, Application US/10033522

Patent No. 6793919

GENERAL INFORMATION:
FALLELICANT: MOHILER, Kendall M.
TITLE OF INVENTION: Methods for Treating Rheumatoid Arthritis Using IL-17 Antagonists
TITLE OF INVENTION: WASHER: US/10/033,522
CURRENT APPLICATION NUMBER: US/10/033,522
CURRENT PILING DATE: 2000-10-18
PRIOR FILING DATE: 2000-10-18
NUMBER OF SEQ ID NOS: 4
SOFTWARE: PatentIn version 3.1

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
